BARNES THYROID TEST

This test was developed by Dr. Broda Barnes, M.D. and is a measurement of the underarm temperature to determine hypo and hyperthyroid states. The test is conducted by the patient in the a.m. before leaving bed - with the temperature being taken for 10 minutes. The test is invalidated if the patient expends any energy prior to taking the test - getting up for any reason, shaking down the thermometer, etc. It is important that the test be conducted for exactly 10 minutes, making the prior positioning of both the thermometer and a clock important.

PRE-MENSES FEMALES AND MENOPAUSAL FEMALES

Any two days during the month

FEMALES HAVING MENSTRUAL CYCLES

The 2nd and 3rd day of flow OR any 5 days in a row

MALES

Any 2 days during the month

You can do the following test at home to see if you may have a functional low thyroid. Use an oral thermometer or a digital one. When you use a digital one, place the probe under your arm for 5 minutes then turn your machine on; continue on for an additional 5 minutes. When using a regular one, shake down the night before.
